

# Astronomy Minor

---

A minor in Astronomy provides another option especially for students majoring in Arts and Social Sciences to get a degree in science that is not math intensive but very interesting and appealing.

## Required Courses

|                                      |   |    |
|--------------------------------------|---|----|
| ASTR 1303                            | Stars and the Universe  | 3  |
| or ASTR 203                          | Stars and the Universe for STEM Majors  |    |
| ASTR 1103                            | Introductory Astronomy Lab  | 1  |
| ASTR 1304                            | Solar System  | 3  |
| PHYS 401                             | Current Topics in Physics and Astronomy (1 sh, must be repeated for total of 2sh) | 2  |
| Minimum 10 hours from the following: |   | 10 |
| ASTR 120                             | Life in the Universe  |    |
| ASTR 260                             | Archaeoastronomy  |    |
| ASTR 310                             | Observational Astronomy   |    |
| ASTR 337                             | Contemporary Frontiers in Astronomy   |    |
| ASTR 410                             | Stellar Structure and Evolution   |    |
| ASTR 420                             | Galaxies and Cosmology  |    |

---

|                    |  |           |
|--------------------|--|-----------|
| <b>Total Hours</b> |  | <b>19</b> |
|--------------------|--|-----------|
